ANGLED FACE BACKLIT WATERFALL PANELS

Technician:
Leandro Papagno
Papagno's Marble & Granite

Next-Level projects are done with the Next-Generation Flexijet 3D.

Going beyond accurate measurements, Flexijet Stone software has the power to create multiple 2D planes in a 3D space, visualizing the results together.

And in a backlit project like this one, the details of the angles matter! Find the exact angles between the difference faces, and create saw-ready shop sheets with Flexijet.

One of the significant benefits of Flexijet Stone is its ability to streamline the design and fabrication process. Papagno's designed and created a jig for assembly and transportation directly in Flexijet stone to make this project possible - shown in the bottom right picture.
